Motorola Solutions steps to comply with the REACH regulation in the European Union

The REACH regulation creates EU chemical policy which aims at avoiding chemical impacts to human health and the environment; the Regulation entered into force on June 1, 2007. On 28 October 2008, the European Chemicals Agency (ECHA) released the Candidate List of Substances of Very High Concern (SVHC). Additional substances have and will continue to be added on an on-going basis. REACH also has provisions to restrict substances over a period of time. Motorola Solutions monitors REACH and other regulations to assure procedures and practices are implemented to meet our obligations.

At Motorola Solutions, Inc., we hold a deep and abiding respect for the environment. Equally, we hold a longstanding and ongoing commitment to the health and safety of our employees, customers, suppliers, partners and community neighbors. As such, Motorola Solutions business units have established processes and designated appropriate personnel to investigate and address compliance with REACH.

If you or your company has an inquiry regarding the material content of a Motorola Solutions product, including whether or not it contains a REACH SVHC above a concentration of 0.1% by weight, please contact us at: corporateresponsibility@motorolasolutions.com

It is Motorola Solutions' policy to design, manufacture and produce products that are environmentally sound throughout their whole life cycle. Information concerning Motorola Solutions' systems for maintaining and demonstrating compliance with the Directive and its other product initiatives can be found at <http://responsibility.motorolasolutions.com/index.php/environment/>
